

Tidal Vape UK: Complete Guide to Refillable Vape Kits & E-Liquids

Buying a vape in the UK can mean choosing between [pod kits](#), [starter kits](#), refillable devices, [prefilled pods](#), [MTL systems](#), RDTL kits and more advanced vape mods. Then there is the e-liquid. Nicotine salts, [50/50 vape juice](#), [freebase liquids](#), shortfills and high-VG blends all have different uses.

Tidal Vape brings these categories together in one online store, with vape kits, pod systems, e-liquids, prefilled pods, replacement pods, tanks and accessories from many of the major brands sold in the UK. The current range includes products from [OXVA](#), Vaporesso, Voopoo, [Geekvape](#), [Uwell](#), Aspire and Lost Vape, among others.

Whether you are buying your first refillable vape or replacing an older device, this guide explains the main options available at Tidal Vape and what to consider before choosing.

What Is a Vape Kit?

A [vape kit](#) is a complete vaping device containing the main components required to use e-liquid. Depending on the type of kit, that can include a built-in battery, pod or [tank](#), coil and charging cable.

Tidal Vape's range covers everything from compact pod devices to larger kits designed for more experienced vapers.

When comparing vape kits, look at:

- **Battery capacity:** A larger battery can be useful if you vape regularly throughout the day.
- **Pod or tank capacity:** This determines how much e-liquid the device can hold.
- **Coil resistance:** Different resistances are suited to different vaping styles and e-liquids.
- **Airflow:** Adjustable airflow lets you change how open or restricted the draw feels.
- **Activation:** Some devices fire when you inhale, while others use a button.
- **Wattage:** Variable wattage gives experienced users more control over their setup.
- **Pod compatibility:** Always check which replacement pods or coils the device uses.

For anyone new to reusable vapes, the [Uwell Caliburn G5 Lite Vape Kit](#), [Uwell Caliburn G5 Lite SE Vape Kit](#), [Vaporesso Xros 5 Mini Pod Kit](#) and [Aspire GoTek X3 Pod Kit](#) are examples of compact devices currently listed by Tidal Vape.

Pod Vape Kits for Everyday Vaping

[Pod systems](#) have become one of the most common types of reusable vape. They are generally smaller than traditional box mods and use a pod instead of a separate tank.

Tidal Vape's pod collection includes refillable devices from brands such as Vaporesso, OXVA, Voopoo, [Geekvape](#), [Aspire](#), Lost Vape and Uwell.

Some current options include:

- **OXVA NeXLIM 2 Vape Kit**
- **OXVA NeXLIM 2 Mini Vape Kit**
- **Vaporesso Xros 6 Pod Vape Kit**
- **Vaporesso Xros 6 Mini Pod Vape Kit**
- **Vaporesso Xros 5 Mini Pod Kit**

- [VooPoo Argus G4 Mini Vape Kit](#)
- **VooPoo Argus G3 Mini Vape Kit**
- [Uwell Caliburn G5 Lite Vape Kit](#)
- [Geekvape Aegis Hero Q Pod Vape Kit](#)

Many pod kits are designed around MTL or RDTL vaping and can work with nicotine salts or [50/50 e-liquids](#), although compatibility depends on the particular pod and coil.

For someone who wants a compact refillable device, pod kits are worth considering because they generally offer:

- Smaller, pocket-friendly designs
- Rechargeable built-in batteries
- Replaceable pods or coils
- Simple operation
- USB-C charging on many current devices
- Options for adjustable airflow
- Compatibility with different e-liquid types depending on the coil

MTL Vape Kits

MTL means [Mouth-to-Lung](#). The draw is generally tighter than a direct-to-lung vape and is often preferred by people who want a more cigarette-like style of inhale.

Tidal Vape has a dedicated MTL collection featuring devices from [Vaporesso](#), OXVA, VooPoo, Geekvape, [Aspire](#), Innokin and Uwell.

Popular examples include:

- **Vaporesso XROS series**
- **OXVA Xlim series**
- **VooPoo Argus series**
- **Uwell Caliburn series**
- **Aspire PockeX Starter Kit**
- **Aspire GoTek X3 Pod Kit**
- **Vaporesso Xros 5 Mini Pod Kit**

MTL devices are usually paired with e-liquids that work well at lower power.

Consider:

- [Nicotine salts](#)
- [50/50 e-liquids](#)
- Higher-PG blends
- Lower-resistance nicotine requirements based on your personal needs
- Pods designed specifically for MTL vaping

Always check the manufacturer's recommended coil and e-liquid specifications rather than assuming that every liquid works in every pod.

Starter Vape Kits for Beginners

A [starter kit](#) is designed to make the move to a reusable vape relatively straightforward. You do not necessarily need a device with multiple settings when you are learning how pods, coils and e-liquids work.

Tidal Vape's current starter range includes the [OXVA Xlim Pro 3 Pod Kit](#), **Lost Vape Ursa Cap Pro Vape Pod Kit**, **Voopoo Argus Matrix Vape Kit**, **Vaporesso Xros 5 Mini Pod Kit**, **Aspire GoTek X3 Pod Kit**, [OXVA Xlim Pro 2 DNA Pod Kit](#) and **VooPoo Argus G3 Mini Vape Kit**.

When choosing your first kit, look for:

- A simple pod filling system
- Straightforward controls
- Easily available replacement pods
- A battery suitable for your daily use
- A coil resistance suited to your preferred e-liquid
- Clear charging and battery indicators
- A size you are comfortable carrying

The [OXVA Xlim Pro 3](#), for example, sits in the compact pod category, while the **Voopoo Argus Matrix** provides a different form factor for someone who wants something slightly more substantial.

More Advanced Pod Mods and Vape Kits

If you have already used pod systems and want more control, a pod mod or [advanced vape kit](#) gives you additional options.

Tidal Vape currently lists devices such as:

- **Voopoo Drag X3 Pod Mod Vape Kit**
- [Voopoo Drag S3 Pod Mod Vape Kit](#)
- **Vaporesso Luxe X3 Vape Kit**
- [Geekvape Aegis Boost 3 Vape Kit](#)
- **Geekvape Aegis Solo 3 Vape Kit**

These devices can offer more control over power, airflow and the type of coil you use.

The [Voopoo Drag X3](#) and **Drag S3**, for example, are pod-mod devices, while the **Geekvape Aegis Solo 3** is aimed more towards the traditional advanced vape setup.

Before buying an advanced kit, consider:

- Whether you actually need adjustable wattage
- Which coils are available
- Whether the device uses a built-in or removable battery
- Which tank or pod it comes with
- The e-liquid ratio recommended for the coil
- How much vapour you want to produce

There is little point buying a large advanced device if you simply want something small and straightforward for MTL vaping.

Choosing the Right E-Liquid

The e-liquid you choose should match your device. Tidal Vape currently lists more than 1,000 e-liquid products across its collection, including nicotine salts, [50/50 liquids](#), shortfills and high-VG options.

The main categories include:

- **Nicotine salts:** Commonly used in pod systems and available in several nicotine strengths.
- [50/50 e-liquid](#): A balanced PG/VG ratio suitable for many lower-power devices.

- **Shortfills:** Larger bottles designed primarily for use with nicotine shots where required.
- **High-VG e-liquid:** Generally intended for suitable sub-ohm devices and higher-power vaping.
- **Freebase nicotine:** Traditional nicotine e-liquid available in different strengths.

Tidal Vape's current e-liquid range includes brands such as:

- Vortex Bar Series
- Elf Bar Elfliq
- Lost Mary
- Vampire Vape
- IVG
- Drifter
- Pod Salt
- Elux
- Riot Squad
- Just Juice

The site also runs mix-and-match offers across selected e-liquids, including 3 for £10 and 5 for £15 deals, although promotions can change.

Nicotine Salts for Pod Systems

Nicotine salts are particularly common among pod users because they are available in compact 10ml bottles and a range of nicotine strengths.

Tidal Vape stocks nicotine salt products from several well-known ranges, including:

- **Vortex Bar Series**
- **Elf Bar Elfliq**
- **[Lost Mary Nic Salts](#)**
- **Drifter Bar Salts**
- **IVG Intense**
- **Pod Salt**
- **[Elux Legend](#)**
- **Vampire Vape**

The right nicotine strength depends on the individual. If you are already using nicotine, choose according to your existing consumption rather than simply selecting the strongest available option.

It is also important to match the liquid to the pod. A high-strength nicotine salt is not automatically suitable for every device.

Shortfills and High-VG E-Liquids

[Shortfills](#) are larger bottles of nicotine-free e-liquid that leave room for nicotine shots to be added where appropriate. They are generally associated with larger devices and higher-powered vaping.

Tidal Vape stocks 50ml and 100ml shortfills alongside nicotine shots and high-VG e-liquids.

Shortfills can be useful if you:

- Use a sub-ohm device
- Prefer larger bottles
- Want to use nicotine shots where applicable
- Prefer higher-VG liquids
- Go through e-liquid relatively quickly
- Want more flavour options in larger formats

Do not put a high-VG shortfill into a small MTL pod simply because you like the flavour. The coil and pod specification should come first.

Prefilled Pod Systems

[Refillable pods](#) are not the only option at Tidal Vape. The store also has a large selection of prefilled pod systems.

These can be useful when you want a device that does not require bottles of e-liquid or manual refilling.

Tidal Vape's prefilled range includes products from brands such as:

- Elf Bar
- Lost Mary

- IVG
- SKE
- [Vortex Bar](#)
- Hayati
- [Pyne Pod](#)
- Pixl

The site also lists products such as [Lost Mary NERA 15K Prefilled Pods](#), **Lost Mary BM6000 Pods** and [Zeltu X3 Pre-Filled Pods](#).

Before buying a prefilled system, check:

- Pod compatibility
- Nicotine strength
- Flavour
- Pod capacity
- Whether replacement pods are available
- Whether the system is rechargeable

Replacement Pods and Coils

A vape kit is only useful as long as you can maintain it. [Pods](#) and coils are consumable parts, so checking replacement availability before buying a device is sensible.

Tidal Vape stocks replacement pods and cartridges for several popular systems.

Examples include:

- **Vaporesso XROS COREX 3.0 Pods**
- **OXVA NeXLIM Cartridges**
- **Voopoo Argus Top Fill V2 Pods**
- [Lost Mary BM6000 Pods](#)
- **Hayati Pro Ultra Plus 25K Pods**
- **Pyne Pod Click Pods**
- [Zeltu X3 Pre-Filled Pods](#)

Keeping spare pods available can also be useful if you use your vape every day. A replacement pod is often all you need when the existing pod reaches the end of its usable life.

Why Shop Vape Kits and E-Liquids at Tidal Vape?

Tidal Vape puts [vape kits](#), [e-liquids](#), pods and accessories into one store, making it possible to build or replace a setup without shopping across multiple websites.

Some of the current benefits include:

- A large selection of vape kits
- Major brands including OXVA, Vaporesso, Voopoo, Geekvape, Aspire and Uwell
- Refillable pod systems
- MTL and RDTL options
- E-liquids in different nicotine strengths
- Nicotine salts and 50/50 liquids
- Shortfills and high-VG options
- Replacement pods and cartridges
- Prefilled pod systems
- Selected vape kits with two free e-liquids
- E-liquid multi-buy offers
- UK delivery and click & collect options

Selected Tidal Vape kits currently include two free e-liquids, while the site also promotes various e-liquid multi-buy offers. These deals are subject to change, so check the product or collection page before ordering.

Finding the Right Tidal Vape Setup

There is no need to start with the biggest or most complicated vape available. The right device depends on how you prefer to vape, what e-liquid you use and how much control you want.

For a compact pod setup, consider:

- **OXVA NeXLIM 2**
- [OXVA Xlim Pro 3](#)
- **Vaporesso Xros 6 Mini**
- **Vaporesso Xros 5 Mini**
- **Voopoo Argus G4 Mini**
- [Uwell Caliburn G5 Lite](#)

For more control, look at:

- [Voopoo Drag X3](#)
- **Voopoo Drag S3**
- **Vaporesso Luxe X3**
- [Geekvape Aegis Boost 3](#)
- **Geekvape Aegis Solo 3**

For e-liquid, match the liquid to the device rather than choosing based on flavour alone. Nicotine salts and [50/50 liquids](#) are commonly used in pod systems, while shortfills and higher-VG liquids are generally better suited to compatible higher-powered devices.

Tidal Vape gives UK vapers plenty of options across each category. Whether you are replacing an old pod, trying a different e-liquid, moving from a [starter kit](#) to a more advanced device or simply stocking up on your usual vape juice, you can compare the available kits, pods and e-liquids in one place.

Browse the current Tidal Vape range, check the specifications and compatibility of your chosen device, and choose a setup that fits the way you vape.
